

520Bar Jetting System

Dredging & Jetting Tools.

DESCRIPTION

Forum 520Bar Jetting System is widely recognised and used throughout world due to its reliability and impressive pumping capabilities;no other system offers the same power and reliability. The Integral relief valve is adjustable to provide any pressure range desired from 0.5 – 520 Bar.

The pump is suitable for connection to any subsea reservoir via the $\frac{3}{4}$ suction port. The system is designed to be capable of pumping water, sea water, hydraulic oil or glycol. This highly versatile system can be used as either an IHPU or Jetting system making it an invaluable and effective tool for any ROV system

FEATURES

- 520 Bar Jetting System
- Mounted on ROV friendly plate

520Bar Jetting System

Dredging & Jetting Tools.

SPECIFICATIONS

Max Hydraulic Input	210Bar (3,000psi)
Max Input Flow	60LPM (13.5GPM)
Max Output Pressure	520 Bar (7,500 psi)
Weight in air	27kg
Suitable for pumping:	Seawater Glycol Hydraulic Oil
