

Packing Nut Locks

As a critical component to your pressure pumping operations, fluid ends are also considered one of the most vulnerable to premature failure in the field. Determined to solve an issue many operators are faced with, our team of experts have designed Forum's Packing Nut Lock tool, eliminating packing nut back-off occurrences.

Forum's new Packing Nut Locks apply force between the stay rods and packing nuts to mitigate the packing nuts from backing off. Compatible with most fluid ends, our patent-pending design can be easily installed or removed with a hex wrench, making our Packing Nut Lock a simple solution to maximize the longevity of your fluid ends.

Key Features

- Compatible with Most Fluid Ends
- Eliminates Packing Nut Back Offs
- Tool Locks in Any Packing Nut Position
- QPQ Surface Finish Helps to Ensure No Corrosion/Rust
- Integrated Magnet Allows Locks to Remain in Place When Loosened

We provide smart solutions and powerful products. Contact our team today to learn more about the pumping solutions we can provide to improve your operations.
