

Pump Saver Plus

The Multilift Solutions **Pump Saver Plus** is designed to be installed with and positioned below the intake of artificial lift equipment, protecting it from the harmful effects of sand and gas intake.

Features

- Separate gas and sand without any impact or effect on Pump function
- Negligible pressure drop through the tool
- No sand re-circulation
- Avoid costly workovers due to gas lock and sand obstruction
- Improve Pump efficiency
- Prolong run-life
- Enhance production and operating envelope

Benefits

- Prevention of gas lock, increasing uptime and production
- Prevention of abrasive wear and mechanical failure reducing workover and equipment costs
- Significant Increased run life of down hole pump and integrity of artificial lift equipment
- No moving components reducing possibility of failure

Applications

- Sucker Rod
- PCP
- ESP
- High abrasive conditions
- High GOR and GLR wells
