# Jumbotron

## **Quality and Serviceability**

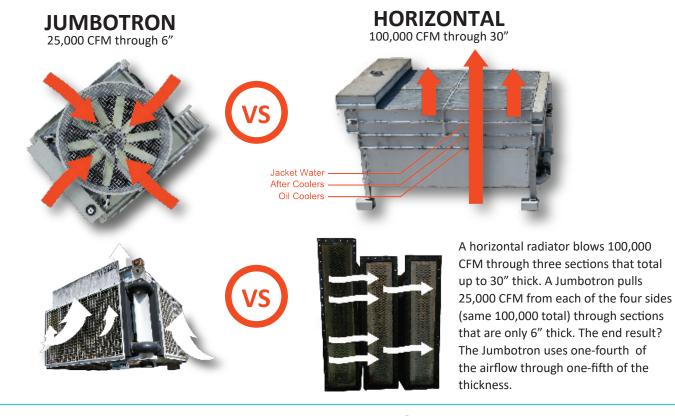

Jumbotrons have proven to operate successfully in climates ranging from the Canadian Arctic to the Texas heat. Since 2009, we have gone through five major redesigns all in an effort to improve product quality and longevity.

### **The Jumbotron Difference**

- Patented Cooler Isolation Mounts allow coolers to float in steel frame.
- Patented Airflow Improvement Kit improves airflow by up to 20%, thereby increasing ambient capability.
- Patented Noise Reduction technology
- Hydraulic Installation Kit includes upgraded proprietary Hydraulic Motor with L10 bearing life of 42,500 hours, Anti-Cavitation Valve, Flushing Valve, all Hydraulic Hoses installed and run to bottom of Jumbotron for ease of installation.
- Ladder Option available.

Ease of service whether in the field or in the shop. Cleaning can be done directly on the unit, with removing or disconnecting any component parts.

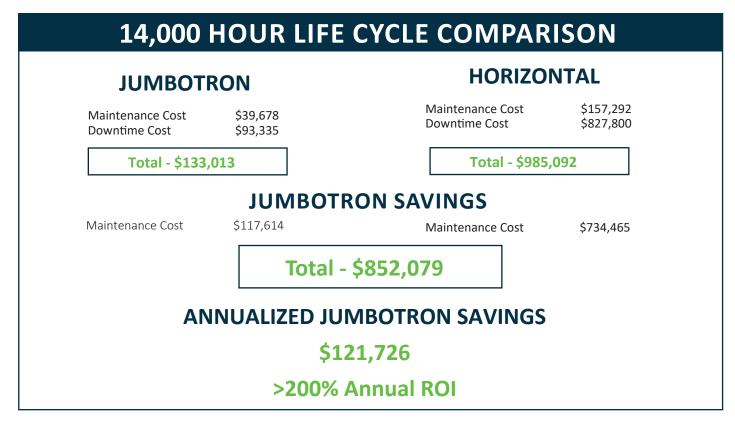

- All Cooler Ports located at bottom of Jumbotron for quick and simple connection and disconnection.
- Access Panel in floor can be placed in multiple locations.
- Patented Motor Mount Design.
- New Expansion Tank Design.
- Each individual cooler can be removed from the frame without detaching any other. Conversely, a horizontal radiator must be drained, removed from the trailer, and broken down into individual sections to either replace or clean a sectionSingle Jumbotron footprint for all Tier 2 engines and the majority of Tier 4 engines.

## STIMULATION

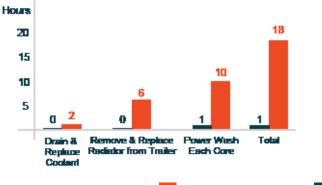

### **Maintenance Benefits**

#### **Cleaning Comparison**

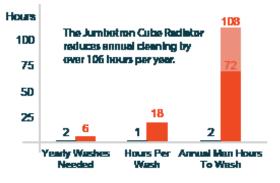

Each cooler is individually mounted to the outside of the steel frame with four to eight bolts. It can be cleaned with a pressure washer and without having to remove the radiator from the trailer. With a horizontal there is no way to clean it without draining it, unhooking the piping, removing the radiator from the trailer, sending it to a rad shop (or spend 18 – 24 hours washing it), bolting the rad back on, hooking up the hoses and filling it back up. With the Jumbotron you will never have to remove a radiator from the trailer for cleaning again.

#### **Fouling Resistant**

In a horizontal radiator 100% of the total airflow is blown through each core. This causes the cores closest to the fan to plug quickly. The Jumbotron design pulls 25% of the total airflow from 4 sides equally and discharges it out the top. This innovative design dramatically reduces the total airflow going through each core and helps reduce the fouling of the core in the field.
